

Remo Yukoff

Senior AI Quality & Test Automation Engineer

Argentina (Remote) | remo.yukoff@gmail.com | +54 9 364 433-8125 | linkedin.com/in/remoyukoff
github.com/RemoYukoff

Summary

Senior quality and test automation engineer with 8+ years of experience building automation frameworks for web platforms, APIs, and data pipelines, now focused on quality engineering for LLM-powered products. Built and launched Quorum, a paid SaaS where an AI agent designs test cases from Jira stories, and 4foodies, a production social platform with an iOS app and a self-hosted backend. Experience with global organizations including The Walt Disney Company, PwC, Cision, Under Armour, and Intercontinental Exchange. Fluent English (C1).

Products

Quorum — AI test design for Jira (usequorum.dev) Oct 2026 – present

- Built and launched a paid SaaS where an LLM agent turns Jira stories into test cases mapped to acceptance criteria and syncs accepted cases back to Jira as sub-tasks (Next.js, TypeScript, PostgreSQL, Drizzle)
- Designed a tool-calling agent loop (Vercel AI SDK, Claude via OpenRouter) where every change is a Zod-validated tool call retried with error feedback, and ambiguous requirements trigger clarifying questions instead of guesses
- Implemented LLM cost controls with Terraform-managed OpenRouter budgets and model guardrails, per-subscriber usage allowances, and daily budget alerts (about \$0.12 per generation)
- Shipped OAuth, encrypted Jira credentials, and subscription billing, built with an orchestrated multi-agent AI coding workflow

4foodies — Social restaurant reviews (4foodies.app) Nov 2025 – present

- Built and launched a social restaurant-review platform with an iOS app (React Native, Expo), a REST API (Node.js, Express, OpenAPI), and PostgreSQL on Supabase with row-level security
- Designed ranking and feed algorithms for explore scoring, trending restaurants, and follower suggestions, plus a background import pipeline for Google Maps lists with scheduled jobs
- Run production on a self-managed VPS (Docker Compose, Traefik) with GitHub Actions deploys, image rollback, Prometheus/Grafana/Loki observability, and about 200 Vitest and Supertest tests

Experience

Software Development Engineer in Test (Contract), The Walt Disney Company (via Wizeline) Oct 2024 – present

- Automate validation of large-scale data pipelines supporting audience segmentation for streaming platforms
- Validate datasets using SQL checks, schema validation, and dataset comparisons across Spark and Databricks pipelines
- Test Airflow-scheduled batch pipelines backed by S3, Glue, and Databricks, querying outputs with Athena SQL
- Partner with data engineering teams to investigate failures and improve pipeline reliability

Software Development Engineer in Test (Contract), PwC (via Tata Consultancy Services) May 2024 – Oct 2024

- Designed the automation strategy for enterprise platform validation
- Built regression suites in Katalon and integrated them into CI pipelines

Software Development Engineer in Test (Contract), Eclypsium June 2022 – May 2024

- Designed and implemented a Python automation framework using pytest, Behave, and Selenium, with Page Object Model architecture, fixtures, and Allure reporting, integrated into Jenkins, GitHub Actions, and GitLab CI
- Performance-tested APIs at 1–5k requests per second using Locust
- Used Docker and LocalStack to simulate AWS services for integration testing
- Stabilized a legacy automation framework, enabling adoption across the QA team

Test Automation Engineer (Contract), Cision (via Encora)

Aug 2021 – Feb 2023

- Automated testing for a large-scale media analytics platform processing high volumes of news and article data through Kafka-based ingestion pipelines
- Developed Selenium UI automation and API testing using pytest, requests, and Postman, and load-tested APIs with k6
- Mentored junior QA engineers and contributed to testing strategy

Test Automation Engineer (Contract), Under Armour / Intercontinental Exchange (via Solvd)

Mar 2018 – Aug 2021

- Reduced regression testing time by approximately 40% through automation improvements
- Automated iOS and Android application testing using Appium
- Developed Selenium and Cypress automation for web and API testing

Skills

- **Programming Languages:** Python, TypeScript, JavaScript, Java, SQL
- **AI & LLMs:** LLM agents with tool calling, Vercel AI SDK, OpenRouter, Claude, prompt engineering, structured output validation (Zod), LLM cost monitoring
- **Test Automation:** pytest, Selenium, Playwright, Cypress, Vitest, Behave, Cucumber, Appium, Allure, k6, Locust
- **APIs & Backend:** Node.js, Express, Next.js, REST APIs, OpenAPI, GraphQL, requests, Postman, REST Assured
- **CI/CD & Cloud:** GitHub Actions, Jenkins, GitLab CI, Docker, Traefik, Terraform, LocalStack, Vercel, AWS (S3, Athena, Glue), Supabase
- **Data & Pipelines:** Spark, Databricks, Airflow, Kafka, SQL and schema validation, dataset comparisons
- **Databases & Observability:** PostgreSQL, MySQL, MongoDB, Drizzle ORM, Prometheus, Grafana, Loki, Elastic

Open Source Projects

Aqueductus

- Developed an open-source data testing framework for validating datasets and pipeline outputs
- Runs SQL-based validations across multiple data sources from YAML-defined test cases and assertions

Behave Runner

- Created a VS Code extension that runs Behave BDD feature files and scenario outlines directly from the editor

Education

University of London, Bachelor of Science in Computer Science

Oct 2026 – present

Acámica, Data Science

University of Buenos Aires, Artificial Intelligence (IALAB)

Languages

- Spanish (Native), English (Advanced, C1)
